

DATAROAD **IT_**

WE DO IT RIGHT

IT NETWORKS · BUSINESS WIRELESS · ONGOING MANAGEMENT

Your network, built to **keep** **running.**

DataRoad's track record in installing IT and wireless networks — and the monthly care that keeps them working like on day one.

We do IT right.

DataRoad — IT Services and Consulting · dataroad.pt

PREMIUM MSP · SINCE 2015

Chosen by those who **can't stop.**

Since 2015, DataRoad has designed, installed and managed IT and wireless networks for **hotels, clinics, multinationals, educational institutions and public bodies**. Headquartered in Alfragide, with support across Portugal — and international clients who trust us with their operations in Portugal.

From cabling to Wi-Fi 7. **One accountable partner.**

Certified structured cabling

Design, installation, certification and labelling of every point. Full documentation is delivered with the job.

Business wireless, Wi-Fi 6 and 7

Coverage planned room by room, centralised cloud management and guest networks isolated from operations.

Switching and network core

PoE Layer 3 switches, tidy racks and redundant links, sized to grow.

Network security

Business firewall and VLAN segmentation between production, teams, systems and guests.

Fibre and connectivity

Fibre links between buildings and racks, Starlink and redundant internet access.

CCTV video surveillance

IP cameras integrated into the same infrastructure, with continuous recording and controlled access.

We work with leading manufacturers such as **Ubiquiti UniFi** and **Cisco Meraki**.

Real projects. **Real numbers.**

56

Wi-Fi 7 access points

Serviços Sociais da Administração Pública — three buildings, in Évora, Aljubarrota and São Pedro do Sul, awarded by public tender.

192

Structured cabling points

Clínica Mulher, Twin Towers (Sete Rios) — about 50 workstations, ready from day one.

30+55

Access points and CCTV cameras

Ouro Rossio Hotel — six floors with fully cloud-managed Wi-Fi and complete video surveillance.

0

Days of downtime

Magnelusa — a new, certified and documented network, installed in phases without stopping the business.

- Networks for students, faculty and administration
- On-site and remote support

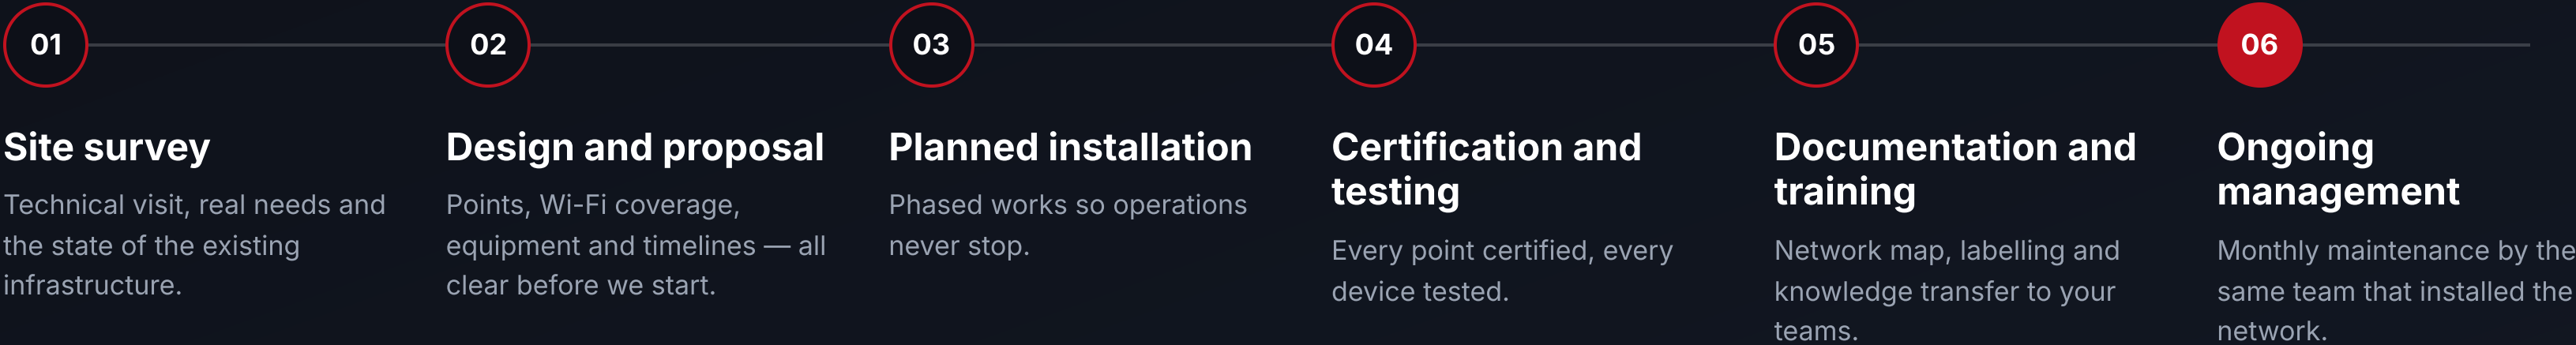

RENT-A-CAR · EUROPE

Klass Wagen

Operation in Portugal

- Network for operating spaces
- Business wireless for counters
- Continuous technical follow-up

One method. **From survey to ongoing management.**

Whoever installs the network is who maintains it — and who knows it best.

AFTER THE INSTALLATION

A network isn't **installed and forgotten.**

On handover day the network is perfect. From then on it starts to change: more devices, more users, new threats, expiring warranties. Without follow-up, degradation is silent — until the day it fails.

The cost of maintaining the network is always lower than the cost of having it down.

Outdated firmware

Known vulnerabilities stay open on the firewall, switches and access points.

Wi-Fi that loses quality

More devices and new interference: the coverage that worked no longer does.

Failures without a plan

Out-of-warranty equipment, no replacement and nobody who knows the configuration.

Changes without records

Every rushed change moves the network away from the original design and makes it more fragile.

The network looked after, **every month.**

✓ **Proactive monitoring**

We monitor network equipment and often act before the problem reaches users.

✓ **Always-optimised Wi-Fi**

Periodic review of channels, power and coverage as the space changes.

✓ **Up-to-date documentation**

Network map and configuration backups always current.

✓ **Security updates**

Firewall, switch and access point firmware updated in a planned way.

✓ **Warranties and replacements**

Management of equipment warranties and replacement in case of failure.

✓ **A single point of contact**

The same team that installed the network answers for it, end to end.

Three levels of care. **One fixed monthly fee.**

IT UNLIMITED

Essential

For companies with 10 or more workstations.

- Remote and phone support
- Network and workstation monitoring

On-site visits quoted separately.

RECOMMENDED

IT UNLIMITED

Premium

For companies that want IT fully handled.

- Remote and phone support
- On-site assistance included
- Network and workstation monitoring

IT UNLIMITED

Premium 365

For operations that never close: hotels, clinics, industry.

- Everything included in Premium
- Nights, weekends and holidays
- 24/7 support and monitoring

Unmanaged vs. **with DataRoad.**

	Without maintenance	With DataRoad IT_
Problem detection	When someone complains	Proactive network monitoring
Security	Updates when someone remembers	Planned, logged updates
Equipment failure	Find a technician, ask for a quote, wait	Diagnosis and replacement managed by us
Network knowledge	Scattered or lost	Documented, with the same team
Costs	Unpredictable, with every call-out	Fixed, predictable monthly fee

TOGETHER WITH YOUR PROPOSAL

We install the network. **And we stay with it.**

Talk to us to add the right monthly maintenance plan to your installation.
